

Dr. Allison Unger is a New England native, having lived in Rhode Island until graduating from the University of Rhode Island with a B.S. in Animal Science and Technology. She then moved to Vermont to complete a doctorate in Animal, Nutrition and Food Sciences at The University of Vermont under the supervision of Dr. Jana Kraft. Dr. Unger's work has centered on investigating how long-term consumption of different sources of dietary fat influences metabolic health later in life, and her professional interests include topics relating to sustainable agriculture, nutrition, and health – and above all, science communication. Dr. Unger is currently a post-doctoral associate at The University of Vermont, where her research focuses on the relationship between the gut microbiota and the immune system.
